

ENERGY EFFICIENCY SAVES MONEY (AND THE PLANET)

The FrontRow Pro Digital is the one of the most energy-efficient classroom sound systems available on the market today.

FrontRow products save money

The US Government reports that 40% of all electricity used to power conventional electronics is consumed while the products are turned *off*. The FrontRow Pro Digital, however, runs on less than half the energy of most other classroom amplification products — without even requiring teachers to turn it off.

Making a difference

More than saving money, FrontRow products also make a difference for the environment. That's because every time you flip on classroom lights, run your computers, or run a sound system, you generate greenhouse gas emissions from power plants. The more energy we can save through energy efficiency, the more we help ensure our kids have a healthy world in which to use the education we're giving them today.

Energy matters

To help you save energy and money and make a difference for the environment, FrontRow is proud to offer you classroom sound systems that save energy and help protect the environment, without sacrificing features or performance.

Using 63% less energy than competitive systems, the FrontRow Pro Digital saves schools money, and supports green initiatives, making the world a healthier place for all.
