

## FEEDBACK SUPPRESSION FOR A CALMER CLASSROOM

### More teaching, less screeching

In a worldwide survey of nearly one million people, microphone feedback ranked as the second most annoying sound. Imagine trying to refocus a class after jolting them with this [irritating noise](#).

### Digital intelligence

Adapto™ is the world's first and only digital signal processing platform for classrooms. It makes installation and daily use easier than ever before by invisibly handling details — like suppressing feedback and optimizing power usage — that are hard or impossible for staff to manage.

#### HOW ADAPTO WORKS

Adapto instantly recognizes emerging feedback, so classrooms aren't harshly interrupted.

Luckily, FrontRow's powerful Adapto™ platform digitally listens for feedback 500 times per second and stops it *before* it disrupts class. That means teachers can move freely without fear of harsh interruptions, making it easier to focus on teaching calmly and clearly.

This feedback suppression feature is exclusively available in the [FrontRow Pro Digital system](#).
