

## Workspace™

Workspace™ is the award-winning software used to create and assemble the interactive lesson content you control with the Mobi™ and DualBoard™. Workspace's open design allows you to incorporate and work with teaching materials in multiple formats from any source, including publishers' ExamView® content and question banks, web-based content, and third-party curricula. Eliminate worries about any importing or compatibility issues.

Use the Workspace™ content capture tool to access any screen content, including text, pictures, graphics, videos, audio files, and Flash animations. Workspace™ includes more than 4,000 teaching resources, from engaging images and animations to complete interactive lessons, organized and searchable by subject area. Workspace™ also houses an extensive Flash library called SIMS™ that contains interactive animations and simulations you can use as warm-up exercises, enrichment, and remediation to enhance the learning experience.

Workspace™ also offers more than 50 simple-to-use annotation and teaching tools to help you get your point across and hold students' attention. For example:

- **Curtain**—used to create suspense or hide information (such as the correct answer)
- **Spotlight**—a powerful way to focus attention on a particular point
- **Highlighter**—for added emphasis
- **Magnifier**—to zero in on the most important elements
- **Capture Tool**—to capture any screen content in just a click or two

Workspace™ software provides the platform for multi-user collaboration with Mobi™ and DualBoard™, and makes it possible to harness the power of our CPS™ software from within Workspace™ pages. It is also able to accept simultaneous input from up to nine users, allowing everyone in the class to participate, collaborate, and interact with each other.

## Workspace™ Content

### Teach with any content. Any time.

Workspace's open design allows you to control, annotate, and interact with any of your existing teaching materials, regardless of format, as well as with online content and third party curriculum. You have no importing or compatibility issues to worry about. You can capture any screen content in just a click or two. Imagine the teaching possibilities. You are no longer limited to a single content source or supplier. Workspace™ allows you to expand your content universe.

In addition, Workspace™ includes over 4,000 teaching resources that can be accessed with the stroke of your interactive pen, from educational images to engaging animations, instructional videos to complete interactive lessons.

### Sims

Students love movement and motion. Workspace™ won't disappoint. It includes an extensive educational Flash library called Sims. Sims are instructive animations and engaging simulations. Use them as a warm-up exercise, to teach a difficult concept, to integrate into a lesson, or to just make learning more fun.

### Images

Use the thousands of educational images located in the Workspace™ Gallery to creating lessons or for impromptu teaching. The images are organized by subject matter and can be accessed directly from your toolbar (no Internet connection is required).

800 236 4327

**Word. Excel. PowerPoint. You name it. You can use it.**

In just a few clicks of the Pen, Workspace™ allows you to capture text, pictures, graphics, or virtually any content from popular Microsoft programs such as Word, PowerPoint, and Excel, and use it as a teaching resource.

## **Workspace™ Lesson Library**

Get up and running immediately with eInstruction's online library of classroom-tested lessons created by eInstruction and its teacher community for the benefit of all Workspace™ users.

### **Interactive Lessons**

Using a convenient online search tool, eInstruction provides a large array of Workspace™ interactive lessons—some include integrated assessment questions—created by teachers and aligned to state standards. Search by subject, grade, and state to find just the material you need for your next class.

### **Lesson Features**

- Free to Workspace™ users
- Searchable by grade and subject
- State aligned
- Interactive features
- Integrated assessment questions in some lessons
