

## SAVING TIME AND MONEY WITH SMARTCHARGE™

### SmartCharge prevents damage caused by accidental recharging of alkaline batteries

From our four decades' experience with educational technology, we know that up to 20% of rechargeable electronic devices are destroyed each year — by teachers mistakenly charging alkaline batteries.

That means that buying just ten sound systems from another provider could actually cost you an extra \$300 to \$600 dollars per year — not to mention hours of downtime — because of battery issues.

FrontRow's SmartCharge eliminates these costs by automatically sensing which batteries are safe to charge. No worries. No extra cost.

Our pendant mic has a sensor that only allows charging of rechargeable batteries, preventing damage and downtime.
